

Tunnel Trap Adjustment

- A. Pan Height Adjustment: Change the right angle where dog mounts on crossarm.
- To raise pan height
 - To lower pan height

B. Pan Pressure Adjustment

- Bend dog downward to decrease pan pressure, file burr off the end of dog.

Tips for Certain Target Animals

PINE MARTIN

- Tunnel Trap™ could be camouflaged by painting according to surroundings
- Place light sand on inside bottom of Tunnel Trap™ while paint is still wet to keep the animal from slipping while going through.
- Fasten to tree with wire, etc.

SKUNK

- Use tainted bait at one end of Tunnel Trap™
- Butt baited end up against tree, large rock, etc. and cover with ground litter (be sure baited end is not exposed).
- Stake trap firmly. A good method is to cross stake over top of Tunnel Trap™

BARN RAT

- Place along wall or by their entry hole in pathway to feed bin, etc.
- To avoid catching cats use wire mesh to reduce the size of hole, leaving smaller hole at the bottom of trap.

★ Don't be AFRAID to experiment with your Tunnel Trap™.

Also from Mityng Development

MITYNG'S TRAPBEDDER

1. With Trapbedder in place, loosen trap bed, then push and twist trap to get a firm, solid bed.

2. Firm dirt inside and outside jaws.

3. Slide Trapbedder back and clear dirt from under pan. Slide back in place and sift dirt over trap.

4. Slide Trapbedder out and fill in slots where Trapbedder was.

Allows Trapper to make trap adjustments at the set.
(Model #1 only.)

MODEL #1 fits on #1 & #3 coil, #1u #2 double tongueing, #1u #2 single tongueing and jaws.

MODEL #2 fits #2 & #3 coil, #4 double tongueing, #3 & #4 single tongueing and jaws. (Excluding Dogless traps)

Accessory File for freeing excess wax and fine tuning trigger.
(Works with Model #1 or #2 Trapbedder)
